*DISCLAIMER: This whitepaper is for informational purposes only and does not constitute financial advice. Cryptocurrency investments carry significant risk. Never invest more than you can afford to lose. \$BATTLE token is a freely tradeable token on pump.fun — VeloxFi has no control over who purchases it. The VeloxFi platform is not available to residents of the United States or other restricted jurisdictions.*

# 1. Abstract

---

VeloxFi is a decentralized memecoin battle platform built on the Solana blockchain. The platform enables users to create their own memecoins and pit them against each other in real-time price surge competitions. The coin with the highest percentage price increase within a set time period wins the battle.

Unlike traditional memecoin platforms where users passively hold tokens hoping for price appreciation, VeloxFi transforms memecoin trading into an active, competitive experience. Users become creators, strategists, and competitors — not just holders.

The platform is powered by the \$BATTLE token, which serves as the primary utility token for all platform interactions. A unique battle-based burn mechanism ensures deflationary pressure with every battle that takes place.

# 2. Introduction

---

## 2.1 The Problem

The memecoin market on Solana has exploded in recent years, with platforms like pump.fun enabling anyone to launch a token in minutes. However, the current landscape suffers from several critical issues:

- Passive experience: Users buy tokens and wait, with no active participation
- Whale manipulation: Large holders can manipulate prices at will
- No competition: There is no structured way to pit coins against each other
- Short-lived hype: Most memecoins die within days due to lack of engagement

## 2.2 The Solution

VeloxFi solves these problems by introducing a structured battle system where:

- Users actively participate by creating and battling their own coins
- Fair play is enforced through maximum buy limits (\$5 per transaction)
- Continuous engagement is driven by competitive battles and leaderboards
- Community involvement is incentivized through the \$BATTLE token economy

## 2.3 Why Solana?

Solana was chosen as the foundation for VeloxFi for several key reasons: transaction fees of only \$0.001, speed of 65,000 TPS, and the dominant memecoin ecosystem. For a battle platform, speed is essential — and Solana delivers that.

## 3. Platform Overview

### 3.1 How It Works

| Step | Action           | Details                                                    |
|------|------------------|------------------------------------------------------------|
| 1    | Acquire \$BATTLE | Purchase \$BATTLE tokens via pump.fun using SOL            |
| 2    | Connect Wallet   | Connect Phantom wallet to veloxfi.io                       |
| 3    | Create a Coin    | Pay 1 \$BATTLE fee, name your coin, add logo & description |
| 4    | Open a Battle    | Challenge another coin, set duration                       |
| 5    | Battle Begins    | Both coins trade on VeloxFi's internal bonding curve       |
| 6    | Battle Ends      | System automatically determines winner by % price surge    |
| 7    | Result           | Winner gets badge + 30% of loser tokens — 20% burned       |

### 3.2 Battle Rules

| Rule                    | Value                                          | Purpose                             |
|-------------------------|------------------------------------------------|-------------------------------------|
| Battle duration         | 1h, 3h, 12h, 24h or 7 days                     | Creator chooses at battle start     |
| Winner determination    | Highest % price surge                          | Fair, objective metric              |
| Winner reward           | Battle badge + 30% of loser's tokens           | Direct reward for winning           |
| Loser result            | 50% tokens returned, 20% burned, 30% to winner | Fair loss mechanism                 |
| Fund locking            | Locked until battle ends                       | Prevents manipulation               |
| Max buy per transaction | \$5                                            | Prevents whale dominance            |
| Cooldown between buys   | 1 minute                                       | Active but controlled participation |
| Multiple buys allowed   | Yes — every 1 minute                           | Active participation encouraged     |
| Price mechanism         | Internal bonding curve                         | Automatic, transparent pricing      |

### 3.3 The Bonding Curve

Each battle coin on VeloxFi is priced using an internal bonding curve. The price increases automatically as more people buy and decreases as people sell. No order book or external market needed. All pricing is transparent and mathematically deterministic.

### 3.4 Demo Mode

VeloxFi includes a dedicated demo page where new users can experience battles without real money. No wallet connection required — free simulated \$BATTLE tokens are provided automatically for a full battle experience.

## 4. \$BATTLE Token

### 4.1 Token Overview

| Property        | Details                                         |
|-----------------|-------------------------------------------------|
| Token name      | \$BATTLE                                        |
| Blockchain      | Solana (SPL Token Standard)                     |
| Total supply    | 1,000,000,000 (1 Billion)                       |
| Launch platform | pump.fun                                        |
| Initial price   | Market determined (bonding curve)               |
| Burn mechanism  | 20% of loser tokens burned per battle           |
| Dev token lock  | 100,000,000 tokens locked 1 year via Streamflow |

### 4.2 Token Distribution

| Allocation            | Percentage | Amount      | Purpose                               |
|-----------------------|------------|-------------|---------------------------------------|
| Public market         | 60%        | 600,000,000 | Available on pump.fun for anyone      |
| Platform reserves     | 20%        | 200,000,000 | Rewards & platform operations         |
| Community & marketing | 10%        | 100,000,000 | Influencers, bounties, early adopters |
| Developer (locked)    | 10%        | 100,000,000 | Locked 1 year via Streamflow          |

### 4.3 Token Utility

- Coin creation fee — \$1 in \$BATTLE per new coin (100% to platform)
- Battle opening fee — \$1 in \$BATTLE per battle (100% to platform)
- Presale fee — 5% on every presale purchase
- Future premium features — paid in \$BATTLE

### 4.4 Burn Mechanism

VeloxFi uses a unique battle-based burn mechanism. When a battle ends, the losing side's tokens are distributed as follows:

- 30% of loser's tokens go to the winner — direct reward for winning

- 50% of loser's tokens are returned to the loser — fair loss protection
- 20% of loser's tokens are permanently burned — reducing total supply

This creates deflationary pressure with every battle: more battles = more tokens burned = less supply = potential price appreciation for all \$BATTLE holders.

## 5. Revenue Model

### 5.1 Revenue Streams

| Revenue Stream       | Mechanism                                                         | Timing                    |
|----------------------|-------------------------------------------------------------------|---------------------------|
| Coin creation fee    | \$1 in \$BATTLE per new coin                                      | Instant at creation       |
| Battle opening fee   | \$1 in \$BATTLE per battle                                        | Instant at battle start   |
| Trading fee (1%)     | 1% of every buy/sell transaction                                  | 24/7 automatic            |
| Presale fee (5%)     | 5% of every presale purchase                                      | During presale period     |
| Presale spread       | Difference between pump.fun purchase price and presale sell price | During presale period     |
| \$BATTLE token value | Dev holds 10% of total supply                                     | Grows with platform usage |

### 5.2 Reward System

VeloxFi uses a dynamic reward system where all rewards are paid in \$BATTLE tokens. Each reward has a base token amount and a maximum dollar value cap. The system automatically adjusts the number of tokens based on the current \$BATTLE price.

| Reward                     | Base Tokens     | Max Value |
|----------------------------|-----------------|-----------|
| Referral — inviter         | 500 \$BATTLE    | \$2       |
| Referral — new user        | 250 \$BATTLE    | \$1       |
| First battle won           | 250 \$BATTLE    | \$1       |
| 5 battles won in a row     | 1,000 \$BATTLE  | \$4       |
| 10 coins created           | 500 \$BATTLE    | \$2       |
| OG badge (first 100 users) | 2,000 \$BATTLE  | \$8       |
| Monthly leaderboard #1     | 10,000 \$BATTLE | \$40      |
| Monthly leaderboard #2     | 5,000 \$BATTLE  | \$20      |
| Monthly leaderboard #3     | 2,500 \$BATTLE  | \$10      |
| Tournament winner          | 25,000 \$BATTLE | \$100     |
| Tournament finalist        | 10,000 \$BATTLE | \$40      |

### 5.3 Revenue Projections

| Scenario                 | Daily Volume | Daily Users | Monthly Revenue |
|--------------------------|--------------|-------------|-----------------|
| Early stage (Month 1-3)  | \$5,000      | 50-100      | ~\$1,500        |
| Growth stage (Month 4-6) | \$50,000     | 500-1,000   | ~\$15,000       |
| Established (Month 7-12) | \$500,000    | 5,000+      | ~\$150,000      |
| Viral scenario           | \$5,000,000+ | 50,000+     | \$1,500,000+    |

*Note: These projections are estimates only. Cryptocurrency markets are highly volatile and unpredictable. This is NOT financial advice.*

## 6. Marketing Strategy

---

### 6.1 Token Boost Strategy

VeloxFi uses a strategic DexScreener boost approach to maximize \$BATTLE token visibility after launch. The plan is funded directly by pump.fun creator fees (0.5% of every transaction):

- Target: DexScreener 500x Golden Ticker boost (\$3,999 for 24 hours)
- Funding source: pump.fun creator fees accumulated after launch
- Timing: Only boost when organic volume is already active
- Additional boosts: Birdeye.so and Dextools for wider reach
- Best boost hours: 19:00-23:00 CET when crypto Twitter is most active
- Combine with: Twitter push and Telegram community activity simultaneously

### 6.2 Community Platforms

- Twitter/X (@VeloxFi) — Daily content, battle highlights, community engagement
- Telegram — Fast updates, battle alerts, direct community line
- Discord — Deep community, strategy discussions, dedicated channels
- TikTok — Viral battle videos, countdown content, winner announcements
- Reddit — Posts in r/solana, r/memecoins, r/cryptomoonshots

## 7. Roadmap

| Phase               | Timeline | Milestones                                                    |
|---------------------|----------|---------------------------------------------------------------|
| Phase 1 — Build     | Q2 2026  | Platform development, demo mode, website launch at veloxfi.io |
| Phase 2 — Presale   | Q3 2026  | \$BATTLE presale opens, early supporter rewards, whitelist    |
| Phase 3 — Launch    | Q3 2026  | \$BATTLE on pump.fun, first battles live, leaderboard active  |
| Phase 4 — Growth    | Q4 2026  | Tournament mode, mobile PWA app, influencer partnerships      |
| Phase 5 — Expansion | 2027     | #1 memecoin battle platform on Solana, global community       |

## 8. Security & Fairness

- Maximum \$5 per transaction — prevents whale dominance
- 1-minute cooldown between purchases — active but controlled participation
- Funds locked during battle — prevents manipulation
- Battle burn mechanism — 20% of loser tokens burned per battle
- Bonding curve pricing — mathematically transparent, no manipulation
- Dev tokens locked via Streamflow — transparent and verifiable on-chain

## 9. Legal Disclaimer

---

- VeloxFi does not provide financial advice of any kind
- \$BATTLE token is a freely tradeable token on pump.fun — VeloxFi has no control over who purchases it
- The VeloxFi platform is not available to residents of the United States or other restricted jurisdictions
- Users are responsible for ensuring platform use is legal in their jurisdiction
- All battles involve risk — users may lose a portion of their invested tokens
- VeloxFi is not responsible for losses incurred through platform use

*Cryptocurrency investments are highly speculative and involve substantial risk of loss. Only participate with funds you can afford to lose entirely.*

## 10. Conclusion

---

VeloxFi represents a fundamental evolution in how people interact with memecoins. By transforming passive holding into active competition, we create a more engaging, fair, and entertaining experience for the Solana memecoin community.

The \$BATTLE token creates a sustainable economic model where platform growth directly benefits token holders through the battle burn mechanism and utility demand. With a phased development approach and a clear roadmap, VeloxFi is positioned to become the definitive memecoin battle platform on Solana.

**The battlefield is almost open. **

# VELOXFI

## WHITEPAPER

### NEDERLANDSE VERSIE

#### Memecoin Battle Platform op Solana

---

*DISCLAIMER: Deze whitepaper is uitsluitend bedoeld voor informatieve doeleinden en vormt geen financieel advies. \$BATTLE token is een vrij verhandelbaar token op pump.fun — VeloxFi heeft geen controle over wie het koopt. Het VeloxFi platform is niet beschikbaar voor inwoners van de Verenigde Staten of andere beperkte rechtsgebieden.*

# 1. Samenvatting

---

VeloxFi is een gedecentraliseerd memecoin battle platform gebouwd op de Solana blockchain. Het platform stelt gebruikers in staat om hun eigen memecoins aan te maken en deze tegen elkaar te laten strijden in real-time prijsstijging competities. De coin met de hoogste procentuele prijsstijging binnen een ingestelde tijdsperiode wint de battle.

## 2. Introductie

---

### 2.1 Het Probleem

- Passieve ervaring: Gebruikers kopen tokens en wachten, zonder actieve deelname
- Whale manipulatie: Grote houders kunnen prijzen naar believen manipuleren
- Geen competitie: Er is geen gestructureerde manier om coins tegen elkaar te laten strijden
- Kortlevende hype: De meeste memecoins sterven binnen dagen

### 2.2 De Oplossing

- Gebruikers nemen actief deel door hun eigen coins aan te maken en te laten strijden
- Fair play wordt afgedwongen via maximale aankoop limieten (\$5 per transactie)
- Continue betrokkenheid wordt gestimuleerd door competitieve battles en leaderboards
- Community betrokkenheid wordt beloond via de \$BATTLE token economie

## 3. Platform Overzicht

### 3.1 Battle Regels

| Regel                        | Waarde                                           | Doel                                     |
|------------------------------|--------------------------------------------------|------------------------------------------|
| Battle duur                  | 1u, 3u, 12u, 24u of 7 dagen                      | Maker kiest bij aanvang battle           |
| Winnaar bepaling             | Hoogste % prijsstijging                          | Eerlijke, objectieve maatstaf            |
| Winnaar beloning             | Battle badge + 30% van verliezers tokens         | Directe beloning voor winnen             |
| Verliezer resultaat          | 50% tokens terug, 20% verbrand, 30% naar winnaar | Eerlijk verlies mechanisme               |
| Fondsen vergrendeling        | Vergrendeld tot battle eindigt                   | Voorkomt manipulatie                     |
| Max aankoop per transactie   | \$5                                              | Voorkomt whale dominantie                |
| Cooldown tussen aankopen     | 1 minuut                                         | Actieve maar gecontroleerde deelname     |
| Meerdere aankopen toegestaan | Ja — elke 1 minuut                               | Actieve deelname aangemoedigd            |
| Prijsmechanisme              | Interne bonding curve                            | Automatische, transparante prijsstelling |

## 4. \$BATTLE Token

### 4.1 Token Verdeling

| Bestemming                 | Percentage | Aantal      | Doel                                     |
|----------------------------|------------|-------------|------------------------------------------|
| Publieke markt             | 60%        | 600.000.000 | Beschikbaar op pump.fun voor iedereen    |
| Platform reserves          | 20%        | 200.000.000 | Rewards & platform operaties             |
| Community & marketing      | 10%        | 100.000.000 | Influencers, bounties, vroege gebruikers |
| Ontwikkelaar (vergrendeld) | 10%        | 100.000.000 | 1 jaar vergrendeld via Streamflow        |

### 4.2 Token Gebruik

- Coin aanmaak fee — \$1 in \$BATTLE per nieuwe coin (100% naar platform)
- Battle opening fee — \$1 in \$BATTLE per battle (100% naar platform)
- Presale fee — 5% op elke presale aankoop
- Toekomstige premium features — betaald in \$BATTLE

### 4.3 Burn Mechanisme

VeloxFi gebruikt een uniek battle-gebaseerd burn mechanisme. Wanneer een battle eindigt:

- 30% van de verliezers tokens gaan naar de winnaar
- 50% van de verliezers tokens worden teruggestuurd naar de verliezer
- 20% van de verliezers tokens worden permanent verbrand

## 5. Verdienmodel

| Inkomstenstroom       | Mechanisme                                                                | Timing                      |
|-----------------------|---------------------------------------------------------------------------|-----------------------------|
| Coin aanmaak fee      | \$1 in \$BATTLE per nieuwe coin                                           | Direct bij aanmaken         |
| Battle opening fee    | \$1 in \$BATTLE per battle                                                | Direct bij openen           |
| Trading fee (1%)      | 1% van elke koop/verkoop transactie                                       | 24/7 automatisch            |
| Presale fee (5%)      | 5% op elke presale aankoop                                                | Tijdens presale periode     |
| Presale spread        | Verschil tussen aankoop prijs op pump.fun en verkoopprijs tijdens presale | Tijdens presale periode     |
| \$BATTLE token waarde | Dev bezit 10% van totale supply                                           | Groeit met platform gebruik |

### 5.2 Reward Systeem

VeloxFi gebruikt een dynamisch reward systeem waarbij alle rewards worden uitbetaald in \$BATTLE tokens. Elke reward heeft een basis token bedrag en een maximum dollar waarde cap. Het systeem past automatisch het aantal tokens aan op basis van de huidige \$BATTLE prijs.

| Reward                      | Basis Tokens    | Max Waarde |
|-----------------------------|-----------------|------------|
| Referral — uitnodiger       | 500 \$BATTLE    | \$2        |
| Referral — nieuwe gebruiker | 250 \$BATTLE    | \$1        |
| Eerste battle gewonnen      | 250 \$BATTLE    | \$1        |
| 5 battles op rij gewonnen   | 1.000 \$BATTLE  | \$4        |
| 10 coins aangemaakt         | 500 \$BATTLE    | \$2        |
| OG badge (eerste 100 users) | 2.000 \$BATTLE  | \$8        |
| Maandelijks leaderboard #1  | 10.000 \$BATTLE | \$40       |
| Maandelijks leaderboard #2  | 5.000 \$BATTLE  | \$20       |
| Maandelijks leaderboard #3  | 2.500 \$BATTLE  | \$10       |
| Tournament winnaar          | 25.000 \$BATTLE | \$100      |
| Tournament finalist         | 10.000 \$BATTLE | \$40       |

## 6. Roadmap

| Fase               | Tijdlijn | Mijlpalen                                                          |
|--------------------|----------|--------------------------------------------------------------------|
| Fase 1 — Bouwen    | Q2 2026  | Platform ontwikkeling, demo modus, website lancering op veloxfi.io |
| Fase 2 — Presale   | Q3 2026  | \$BATTLE presale opent, vroege supporter beloningen, whitelist     |
| Fase 3 — Lancering | Q3 2026  | \$BATTLE op pump.fun, eerste battles live, leaderboard actief      |
| Fase 4 — Groei     | Q4 2026  | Tournament modus, mobiele PWA app, influencer partnerships         |
| Fase 5 — Expansie  | 2027     | #1 memecoin battle platform op Solana, wereldwijde community       |

## 7. Beveiliging & Eerlijkheid

- Maximum \$5 per transactie — voorkomt whale dominantie
- 1 minuut cooldown tussen aankopen — actieve maar gecontroleerde deelname
- Fondsen vergrendeld tijdens battle — voorkomt manipulatie
- Battle burn mechanisme — 20% van verliezers tokens verbrand per battle
- Bonding curve prijsstelling — wiskundig transparant, geen manipulatie
- Dev tokens vergrendeld via Streamflow — transparant en verifieerbaar on-chain

## 8. Juridische Disclaimer

- VeloxFi verstrekt geen financieel advies van welke aard dan ook
- \$BATTLE token is een vrij verhandelbaar token op pump.fun — VeloxFi heeft geen controle over wie het koopt
- Het VeloxFi platform is niet beschikbaar voor inwoners van de Verenigde Staten of andere beperkte rechtsgebieden
- Gebruikers zijn verantwoordelijk voor het waarborgen dat gebruik van het platform legaal is in hun rechtsgebied
- Alle battles brengen risico's met zich mee — gebruikers kunnen een deel van hun tokens verliezen
- VeloxFi is niet aansprakelijk voor verliezen die worden geleden door gebruik van het platform

*Cryptocurrency investeringen zijn sterk speculatief en brengen aanzienlijk verliesrisico met zich mee. Neem alleen deel met fondsen die u zich volledig kunt veroorloven te verliezen.*

## 9. Conclusie

---

VeloxFi vertegenwoordigt een fundamentele evolutie in de manier waarop mensen interactie hebben met memecoins. Door passief houden te transformeren naar actieve competitie, creëren we een meer boeiende, eerlijke en onderhoudende ervaring voor de Solana memecoin community.

**Het slagveld staat bijna open. ✂**
